

Manufacturing in FL, GA, IL, & NC

2016 LEED Information

Carbon Based (Cold Rolled & A60) Steel

HMF Express is very concerned about the impact we have on our environment. That is why we are pleased that the steel we use is made using recycled post consumer and industrial materials. Other recycling programs include our own scrap steel recycling, plastic bottle / aluminum can recycling, and an office paper recycling program.

In regards to the US Green Building Council's (USGBC) Leadership in Energy and Environmental Design (LEED) rating system, our material is eligible for several types of credits. The total average recycled content reported by our steel suppliers in 2016 is greater than 43%. This number is comprised of a combination of post consumer and post industrial recycled material.

Recycled content will vary from heat to heat and will depend on other factors in control of each mill. HMF Express has multiple manufacturing locations across the country and works with a variety of steel suppliers (to ensure availability of raw materials) where recycle content varies as well. Hence our reliance on the average statistics reported by our steel suppliers.
